SUBSCRIPTION RATES—The subscription rates for the ARCHIVES OF DERMATOLOGY are as follows: for members of the AMA, \$1.50 included in the annual membership dues; for nonmembers, \$30 for one year, \$56 for two years in the United States and US possessions; all other countries, one year, \$40; two years, \$76 (add \$10 surcharge to each one-year subscription, \$20 for two years for air delivery to the United Kingdom and Europe only). Special yearly rates to residents and medical students in the United States and US possessions, one year, \$15; two years, \$28. Address all subscription communication to American Medical Association, Circulation and Fulfillment Division, 535 N Dearborn St, Chicago, IL 60610. Phone: (312) 751-6079.

CHANGE OF ADDRESS—POSTMASTER, send address changes to Caryl L. Wertheimer, Director of Fulfillment, 535 N Dearborn St, Chicago, IL 60610. Notification of address change must be made at least six weeks in advance, including both old and new addresses, and a mailing label taken from the most recent copy. Include your new zip code number.

THE ARCHIVES OF DERMATOLOGY (ISSN 0003-987X) is published monthly by the American Medical Association, 535 N Dearborn St, Chicago, IL 60610, and is an official publication of the Association. Second-class postage paid at Chicago and at additional mailing office.

HYTONE® OINTMENT 2½% (hydrocortisone)

... WHERE SKIN HYDRATION IS AN ESSENTIAL ELEMENT OF THERAPY

Brief Summary

Indications: To relieve inflammatory manifestations of corticosteroid-responsive dermatoses.

Contraindications: History of hypersensitivity to any component.

Precautions: If irritation develops, discontinue use and institute appropriate therapy. Use appropriate antifungal or antibacterial agent for infection; if favorable response does not occur promptly, discontinue corticosteroid until it does. If extensive areas are treated or if the occlusive technique is used, there will be increased systemic absorption of the corticosteroid, and suitable precautions, particularly with children and infants, should be taken.

Long-term animal studies of topical corticosteroids have not been performed to evaluate their carcinogenic potential or their possible effect on fertility. Studies to determine mutagenicity with hydrocortisone have shown negative results.

Safe use in pregnancy has not been established. Therefore, topical corticosteroids should be used during pregnancy only if the potential benefit justifies the potential risk to the fetus. Do not use extensively, in large amounts, or for prolonged periods of time in pregnant patients.

Caution should be exercised when topical corticosteroids are administered to a nursing woman.

Not for ophthalmic use.

Pediatric patients may demonstrate greater susceptibility to topical corticosteroid-induced HPA-axis suppression and Cushing's syndrome than mature patients.

Adverse Reactions: (especially under occlusive dressing) burning, itching, irritation, dryness, folliculitis, hypertrichosis, acneiform eruptions, hypopigmentation, perioral dermatitis, allergic contact dermatitis, skin maceration, secondary infection, skin atrophy, striae, miliaria.

Caution: Federal law prohibits dispensing without prescription.
