- Circulating antibodies to bovine collagen were found in all patients who suffered adverse treatment reactions, in some normal individuals, and in a few treated patients who had no reactions. Multiple components of collagen can act as the prime antigenic component for these reactions.
- Fibronectin: Localization in Normal Human Skin, Granulation Tissue, Hypertrophic Scar, Mature Scar, Progressive Systemic Sclerotic Skin, and Other Fibrosing Dermatoses** ..... 995  
*Hiroyuki Nagata, MD; Hiroaki Ueki, MD;*  
*Takahiko Moriguchi, MD, Kurashiki-city, Japan*

- In normal skin, fibronectin (FN) was observed along the dermoepidermal junction (DEJ), papillary dermis, vascular walls, and epidermal appendages. In newly formed granulation tissue, FN increases rapidly in the dermis. Staining for FN in the DEJ, papillary dermis, and vascular walls was more intense in hypertrophic than in mature scars.

## CONTENTS—Continued

- Neutral Lipid Storage Disease With Ichthyosis: Defective Lamellar Body Contents and Intracellular Dispersion** ..... 1000  
*Peter M. Elias, MD, Mary L. Williams, MD, San Francisco*  
• Ultrastructural studies on a kindred with neutral lipid storage disease provide evidence that lipids associated with lamellar bodies influence stratum corneum desquamation.

*Jo-David Fine, MD; Lamar S. Osment, MD; Steffen Gay, MD, Birmingham, Ala*
